PORTFOLIO	lksuey.github.io

~70M	30+	Pioneer	C1
rows managed across 3 to 4 databases, the largest about 27M	pipelines in production in 9 months	first to build the company's data and automation foundation	English, fluent for daily international collaboration

SUMMARY

Mid-level Data Analyst and Data Developer at Grupo Adriano Cobuccio, a nationwide financial company in Brazil: the only mid-level data analyst in the area, who built its internal data and automation foundation from scratch. Owns the full data flow, from scheduled Python pipelines and Google Cloud automations to Power BI semantic models in Microsoft Fabric and the financial dashboards the business uses. Degree in Databases; C1 English.

EXPERIENCE

Data Analyst and Data Developer (Mid-level)

Feb 2026 – Present

Grupo Adriano Cobuccio, Brazil (nationwide financial company)

One of the few data professionals in the company; responsible end to end for analysis, reporting, pipelines, corporate portals and automation.

CAMPAIGN ANALYTICS AND ROI

- Run a customer campaign system in production: scheduled pipelines on Google Cloud (service accounts, Sheets and Drive APIs) feed WhatsApp campaign sends with links to landing pages.
- Built the dashboard that tracks each send, each customer base and the revenue generated, with ROI and profit by campaign model and by product (personal loan, CLT (formal-employment) loan and CLT payroll-deductible loan).

DATA ENGINEERING AND AUTOMATION

- Built and operate 30+ production pipelines in 9 months with Python, pandas, Power Query and Google Apps Script, on schedules, with loads of 3 to 5 million rows; two incidents, each fixed in under one hour.
- Manage about 70 million rows across 3 to 4 databases (the largest about 27 million) in daily Google Sheets tabs, with a monthly rollover, a three-day grace period, row-count reconciliation across live, archived and exported data, and partitioned local exports.
- Load-tested the pipelines and built an admin panel to find and fix failures quickly.

BI AND SEMANTIC MODELING

- Build and maintain complete Power BI semantic models in Microsoft Fabric with advanced DAX, authored in TMDL to speed up delivery, and publish the dashboards to the team through shared workspace links. Also use Tableau.
- Apply static row-level security (RLS) in the semantic models: fixed roles with DAX filters per group or region, so each audience sees only its own data.

SECURITY AND ACCESS CONTROL

- Role-based access control (admin, supervisor, operator and data-team roles) enforced server-side with signed session tokens; progressive login lockout by account and device, salted password hashes, input validation and access audit logs.

Customer Service Representative

2023 – 2024

Almaviva Experience, Brazil

- Managed Excel databases; a record of 183 cases resolved in one day, against an average of 85.

Independent Bug Bounty Researcher

2017 – 2023

Self-employed

- Found and reported vulnerabilities and systemic failures; corporate fraud analysis.

SKILLS

Analytics and BI	Power BI (advanced DAX, TMDL semantic models, static row-level security), Microsoft Fabric, Tableau, dashboards, campaign ROI analytics
Data engineering	Python, pandas, Power Query, Google Apps Script, ETL, scheduled pipelines, data retention and archiving, load testing
Cloud and automation	Google Cloud (service accounts, IAM, Sheets and Drive APIs), PowerShell, Playwright, web scraping, Trello API
Security and access	Role-based access control, session management, login lockout, salted password hashing, audit logging
Databases	SQL (database degree and personal projects)
Languages	English (C1), Portuguese (native), Spanish (B2), Russian (A2)

EDUCATION AND CERTIFICATIONS

- Universidade Estácio de Sá: Technologist Degree in Databases (3-year higher education degree), completed Jul 2026
- Power BI Desktop for Business Intelligence and Tableau Advanced (Udemy, 2025); Excel and Power BI Dashboards (DIO, 2026)
- Forensic Document Examination (Udemy, 2024) and Judicial Expert Training (Academia do Perito, 2024)
